

Press Release

ACTEGA North America to feature In-mold coatings, UV ink systems, narrow web digital primers and special effects coatings at Labelexpo Americas.

Delran, New Jersey, August 3rd, 2018 - ACTEGA North America will feature Aquaprint® In-mold coatings, ACTExact® UV Flexo Ink Systems, ACTDigi® Narrow Web In-line coatings and primers and special effects coatings at Labelexpo Americas 2018.

ACTEGA will introduce its guests at Labelexpo Americas to a wide array of innovative ink, coating, adhesive and primer technologies that functionally and aesthetically enhance label and packaging solutions at this year's show to be held September 25-27 at the Donald E. Stephens Convention Center in Rosemont, Illinois.

At booth #711 in Hall A, ACTEGA North America will be introducing two new Aquaprint® water-based, injection in-mold coating products that yield good appearance, proven value in the molding equipment and excellent scuff resistance. ACTEGA will also be highlighting its ACTDigi® digital primers that work with in-line and near-line priming units for narrow web digital presses. The primers are designed to extend life of printing components and are FDA Indirect and California Proposition 65 compliant.

Also showcased will be the next generation UV ink system, ACTExact®. This system is designed to offer a wider color gamut, improved press speeds and allow for crisper print details as compared to traditional UV ink systems.

Finally, ACTEGA North America will feature its special effect coating line designed to give label printers and Brand Owners eye-catching shelf presence and tactile effects to enhance the consumer experience. The showcase will include the newest special effect product to the MotionCoat™ line. Visit us at Labelexpo to see how MotionCoat™ can bring your labels to life with movement.
